

Splunk: practical_1

Analyzing the windows logs

this is the source file path:

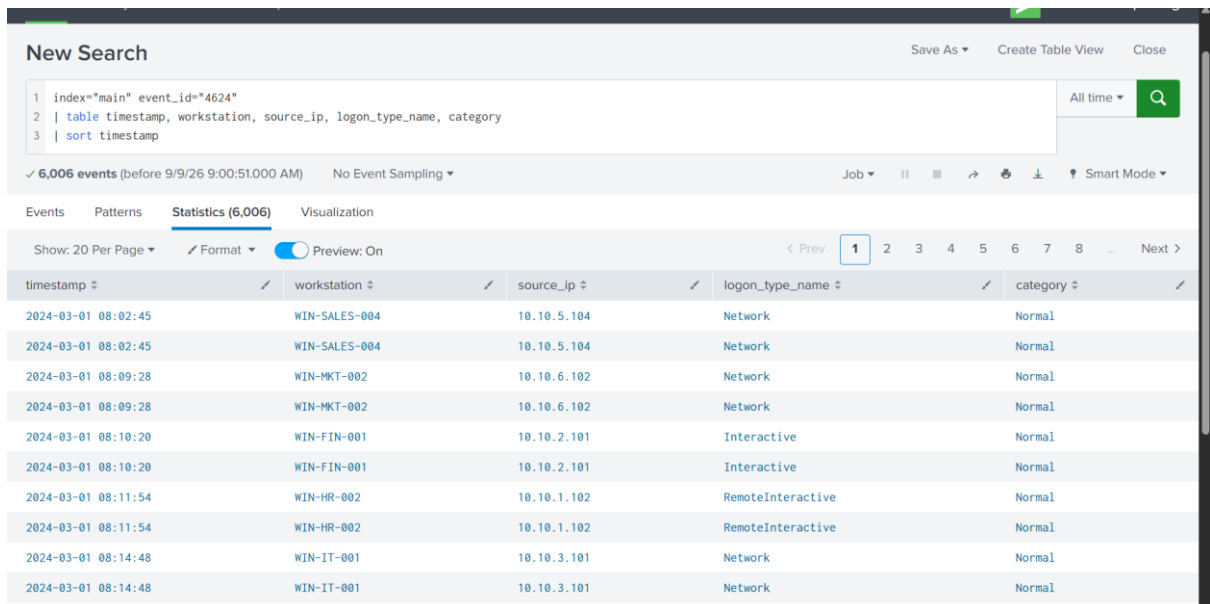

```
source="windows_security_logs.csv" host="LAPTOP-QC21HRM2" index="main" sourcetype="csv"
```

to get count of different process and their id :

```
cmd ---- index="main" | stats count by event_id,event_name | sort -- count
```

to get no.of successful login:

```
cmd --- index="main" event_id="4624" | table timestamp, workstation, source_ip,  
logon_type_name, category | sort timestamp
```

The screenshot shows the Splunk search interface. The search bar contains the query: `index="main" event_id="4624" | table timestamp, workstation, source_ip, logon_type_name, category | sort timestamp`. The results show 6,006 events. The table below displays the first 10 results.

timestamp	workstation	source_ip	logon_type_name	category
2024-03-01 08:02:45	WIN-SALES-004	10.10.5.104	Network	Normal
2024-03-01 08:02:45	WIN-SALES-004	10.10.5.104	Network	Normal
2024-03-01 08:09:28	WIN-MKT-002	10.10.6.102	Network	Normal
2024-03-01 08:09:28	WIN-MKT-002	10.10.6.102	Network	Normal
